6. Remarks and Other Relevant Information:

The Knapp-Wham and Hanan Detwiler irrigation systems lie within the Lower Entiat River Assessment Unit (RM 0.0-16.2) of the Entiat subbasin. The systems run along the right-bank (looking downstream) of the lower Entiat River from about RM 3.7-RM 2.0. The surface water points of diversion for the Knapp-Wham and Hanan Detwiler systems are RM 5.8 and RM 5.0, respectively. The ESA listed salmonids that utilize the mainstem Entiat River within the Lower AU and project portion of the subbasin include endangered Upper Columbia River spring Chinook (*Oncorhynchus tshawytscha*), as well as endangered steelhead (*Oncorhynchus mykiss*) and threatened bull trout (*Salvelinus confluentus*). Non-listed salmonids such as summer Chinook and Coho, and resident fish species such as westslope cutthroat trout are also found here.

The primary goals of the Knapp-Wham/Hanan-Detwiler Irrigation System Consolidation are to eliminate two low flow passage barriers, add instream pool habitat, reduce fish entrainment, conserve water for instream flows, and improve overall water quality. The preferred design will result in Hanan-Detwiler water users being served by the piped Knapp-Wham system, with augmentation by wells in some areas. The objectives of the project include: 1) Eliminating the Hanan-Detwiler surface water diversion and associated unlined irrigation ditch to improve instream flow conditions in the lower river, particularly during the late-summer/fall period, and 2) Enhancement of the Knapp-Wham system and surface water diversion to eliminate low flow passage issues and provide additional large pool habitat complexity within the lower Entiat River.

This project addresses limiting factors and implements actions recommended in the Entiat WRIA 46 Watershed Management Plan approved in 2004, the Entiat Subbasin Plan, and draft Upper Columbia Salmon Recovery Plan. Therefore, we request expedited processing under WAC 173-152-050(2)(b) and (3)(a).

The Grubbs property will be taken of the HD system, put on a new well which will be hooked up to the existing delivery system. The new well will have an eight inch diameter and will supply approximately 133 gpm.
